

## THINGS YOU NEED TO KNOW ABOUT AI AND SUPPLY CHAIN FINANCE

### How we access many services, and the user experience is changing dramatically because of AI

Crossflow, has been an earlier adopter of AI on its working capital platform which connects corporates, and suppliers to sources of working capital such as institutional funders.

**Magda Rozczka**  
CEO  
Crossflow

**1. AI powered risk management builds liquidity** - This has enabled strong risk management and fraud detection which encourages funders to join the Crossflow working capital marketplace significantly improving working capital access for corporates and their suppliers.

**2. Reduced cost of finance to corporates and their suppliers** - Funding institutions thrive on optimising utilisation of their funds, otherwise they are earning zero yield. Crossflow AI selects the most competitive funder for a transaction, which encourages funders to be very competitive on finance rates.

**3. Low AI operating costs reduces the cost of finance** - Crossflow AI supports automated processing. This means that the entire end-to-end process from a supplier requesting and receiving finance through to repayment from the Buyer to the Funder is totally automated. This supports low cost operations which are reflected in the competitive cost of finance enabled through Crossflow.
